# WATCHWIRE CASE STUDY

Extreme Networks is a global leader in cloud-based networking. Last year, Extreme Networks' board discussed using an integrated sustainability and energy management platform to:

- Track and centralize energy and sustainability data in one place for sustainability reporting needs
- Identify additional areas for improvement while ensuring data integrity

As a global company, finding a solution that supported international currency and measurements was also important. As Extreme Networks continued to grow, the manual methods to track and validate data were not scalable and required automation. After evaluation of various solutions, Extreme Networks chose WatchWire as their solution for utility bill management and sustainability reporting in 2021. Beyond reporting, Extreme Networks will also leverage WatchWire to measure and verify conservation measures, track renewables, and assist with forecasting.

Since implementing WatchWire, Extreme Networks has seen three main positive impacts:

1. Improved social governance, sustainability reporting, and goal tracking
2. Improved data quality and data all in one place, rather than across several spreadsheets
3. Visualization/trending of data and easy to digest analytics

## Interested in learning more about WatchWire? Request a free demo or download the WatchWire Sustainability Brief.

WatchWire integrates with ENERGY STAR Portfolio Manager's API, so you no longer have to manually benchmark your data to comply with local laws. Whether or not your city/state requires ENERGY STAR benchmarking with your data, your property/portfolio can still benefit from voluntarily reporting to Portfolio Manager.

WatchWire is a GRESB Premier Data Provider, helping real estate portfolios accurately and quickly report their energy performance indicators. Our platform integrated directly with GRESB's reporting site, allowing automatic updates to performance data each year without having to spend time and resources collecting your data, manually updating, or uploading spreadsheets to the reporting site. WatchWire has the ability to connect with any API so you can ensure your portfolio meets any additional mandatory reporting requirements and also allow you to participate in any voluntary reporting to any benchmarking service in the market (CDP, GRI, etc.).
